Dear Recruiter,

I first heard about this position from **Mostapha Sadeghipour Roudsari** who I believe is in touch with **Ronny** (Ranojoy Dutta) at View.inc. I tracked down a LinkedIn post about this opening by Ronny and that is how I reached here.

I used to be an architect. Currently, I am a sustainability analyst, and I wish to be a building scientist. Not only I have experience in daylight and comfort studies, I also regularly help people do the same with Ladybug Tools. Being one of the contributors of the Ladybug Tools, I take pleasure in helping other users on the forum. For every once in a while a query from an advanced user comes along that either shows us an application of tools that we as developers did not think of or makes us go back and review the fundamentals to address it. This is challenging, but it keeps me in the game.

Apart from that, I enjoy programming. I have found it to be intellectually stimulating. I believe that if you can code something, you know it really well. For coding is really about teaching computers to do what we want. And that requires a level of appreciation for science and logical bend of mind.

Lastly, I have always admired the research works of the others that propose new work-flows and help advance the industry. While I do not have any published work to my credit at this point, I would be certainly happy to be part of a research endeavor. During my coursework at U Penn, I found the process of technical writing intellectually rich, as it demands sincere accountability. Therefore, I also look forward to contributing to research endeavors at View.inc.

To know more about myself and my work, I request you to review my resume. For it contains a lot of information and links to several of my web profiles. Looking forward to hearing from View.inc. Thank you, for taking the time in reading this!

Devang
